Uninstalling the Program
(Demo or Actual program)

Windows
By default, the ImmigrationPro program installs to the C:/ImmPro directory, including all the system extensions (no extensions or any other files are installed to your System or any other file folders).

In the same directory (C:/ImmPro), when you install the program, an Uninstall program/icon is created allowing you to remove the program.

To remove the program, double-click on the Uninstall icon and the program, and all the Extensions, will be removed.

Mac OS X
The program is delivered as a .zip file with the ImmigrationPro program and all system files in 1 folder named ImmPro; no System Extension files are installed to your System folder, all the Extension files are included in the Program Folder. To remove the program and all the Extension files, drag the ImmPro folder to the 'Trash', right-click on the Trash icon and select "Empty Trash".
